

Convert your
John Deere
platforms
and heads to
telescoping
driveshafts.

When do you need a header conversion kit?

All 50 Series combines as well as John Deere Contour Master™ or Hillco LT-100 Lateral Header Tilt equipped combines require platforms or heads equipped with telescoping driveshafts. This allows power to be transmitted to the platform or head while it is tilting.

Contour Master is a trademark of John Deere Corporation.

Compare Hillco Header Conversion Kits ...

To John Deere Conversion Kits:

Lower cost than John Deere conversion kits without sacrificing quality.

To Other Aftermarket Kits:

Better shielding, higher quality components and superior design compared to other aftermarket kits.

-- You'll buy Hillco

Easy to Install Simple instructions for quick installation

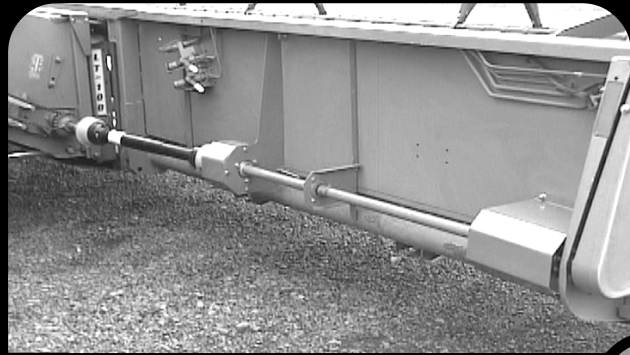

Factory Look Quality design delivers that finished "factory" look.

High Quality Components Highest quality bearings and drivelines

Increase your header's value with top quality Header Conversion Kits from Hillco.

Header Conversion Kits

Flex and Rigid Platforms

Right Side of Platform

Right Side - Slip Clutch with shield removed

Left Side

Flex/Rigid Platform Conversion Kit Components

Includes drivelines (shown below)

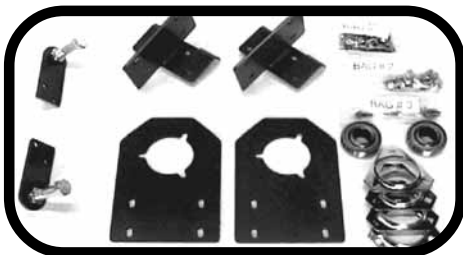

Row Crop and Pick-up Head Conversion Kits are also available.

Corn Heads

Left Side of Head

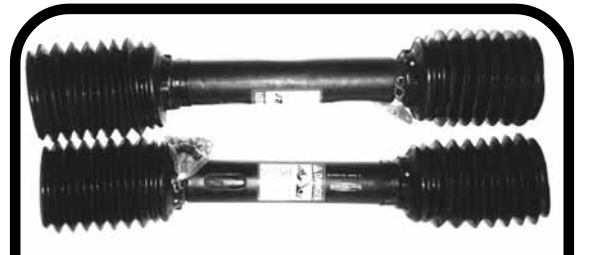

Corn Head Conversion Kit Components

Includes drivelines (shown at right)

Drivelines

These are high quality, low cost, direct replacements for John Deere telescoping driveshafts.

Hillco Conversion Kits use high quality Walterscheid 2400 series drivelines

Drivelines can also be purchased separately.

For detailed ordering information for your platforms and heads, refer to the Hillco Header Conversion Kit Ordering Guide or contact Hillco Technologies for assistance.
